REFERENCE LINE – ALL YOU NEED IS HERE

BORN IN 2008 WITH THE BRAND, IT WAS THE FIRST COMPLETELY MODULAR LINE IN THE WORLD.

FROM THE BEGINNING WE INTRODUCED THE DESIGN AS FUNDAMENTAL FEATURE, BECAUSE A RACK FIRST OF ALL IT'S A FURNITURE.

SIXTEEN DIFFERENT FINISHES AVAILABLE WITH HUNDREDS OF COMBINATIONS AND ONLY FIVE DIFFERENT METAL PARTS (MADE BY SOLID STAINLESS STEEL). A SMART SYSTEM UPGRADABLE IN ANY TIME.

TWO DECOUPLING SYSTEMS: THE FIRST INTO THE SPIKES SHOES (DSD), THE SECOND UNDER EACH SHELF.

REVOLUTION LINE – BORN TO AMAZE

REVOLUTION IS INNOVATION!

OUR FLAGSHIP LINE WAS PRESENTED AT THE HIGH END SHOW IN 2014.

HARMONIOUS SHAPES AND PERFORMANCES WITHOUT COMPROMISES. CARBON MAIN STRUCTURE (CFRP ENDOSKELETON) AND HIGHLY CUSHIONING TECHNO GEL ON WHICH FLOAT THE SHELVES (LHPS SHELVES). AN INNOVATIVE AND SKILLFUL MATERIAL MIX ENHANCES THE CONCEPT OF PERFECTION.

REVOLUTION LINE WAS BORN FROM OUR DESIRE TO DEMONSTRATE THAT WE CAN DREAM.

WE HAVE BELIEVED IN THIS PROJECT FROM THE VERY BEGINNING, WE HAVE BEEN WORKING HARD TO CONTAIN THE COSTS AND INTRODUCE ON THE MARKET AN INNOVATIVE RACK AT AN AFFORDABLE PRICE.

AEON 2.0 IS A REALITY TODAY AND IS THE RESULT OF ALL THE EXPERIENCE GAINED DURING THESE YEARS.

THE RACK WE HAVE DESIGNED IS WHAT WE WOULD LIKE TO HAVE IN OUR HOUSES, IT REPRESENTS OUR IDEAL: SIMPLICITY IS COMPLEXITY RESOLVED (CONSTANTIN BRÂNCUȘI).

TESTING PROCESS (shelf dynamic analysis)

The modal analysis of the CFRP ENDOSKELETON and of the LHP5 SHELF has been performed with a seismic shaker created to generate the vibrations of a source engine (analog or digital) and to understand what actually happens to a rack that undergoes direct stress.

A three-axial accelerometer has been positioned in 42 points of the structure. In this way we have recreated the vibrational movements obtained stimulating the structure with frequencies included between 20 Hz and 11 KHz.

The subsequent analysis of the results evidenced the critical points of the prototype and gave us the opportunity to optimize the orientation of the carbon layers and maximize its performance.

TESTING PROCESS (dynamic analysis of the structure)

Once established the exact composition of the endoskeleton we have done the dynamic analysis of the entire structure.

We have used a measuring hammer and four mono-axial accelerometers on 51 selected points so to recreate the structural net.

With the EMA (Experimental Modal Analysis) and a dedicated software we have detected the parameters of the resonance frequencies, of the dampings and of the modal warps.

This study evidenced some criticality and gave us the opportunity to solve problems that had never been faced before in this market.

The result is a highly performing rack - without compromises - at a very competitive price.
