LUXURY HANDCRAFT

For the past 40 years, TRIANGLE has been designing and assembling its prestigious speakers in our workshop in Soissons. The team of engineers is working closely with production, thus ensuring unparalleled manufacturing quality and compliance

with very precise and detailed specifications.

TRIANGLE's traditional craftsmanship is based on our employees' long experience, some of whom have been with the company for more than 35 years. The different components are controlled and carefully assembled, to achieve the utmost finish and acoustic quality.

DRIVER CRAFT

The high-end transducers assembled in our workshop in Soissons are controlled at each production stage to meet TRIANGLE quality requirements.

Many measurements and controls are done to detect any imperfection: centering control, coil positioning, hearing test for noise, and final control by CLIO of the frequency response curve and impedance.

All these tests guarantee a high level of quality and a very limited dispersion between the drivers.

SOUND ENHANCING TECHNOLOGY

TRIANGLE continuously invests in the latest technology to innovate and improve its acoustic expertise. A Klippel system is used to conceive and simulate the loudspeakers.

Modern prototyping tools, 3D printers, the

latest CAD software, as well as MLSSA and CLIO measuring systems, enable the company to put theory into practice.

Numerous acoustic tests are carried out throughout the process to ensure the compliance of each component. Each speaker is tested in the anechoic chamber, a sample is then taken and listened to in the auditorium.

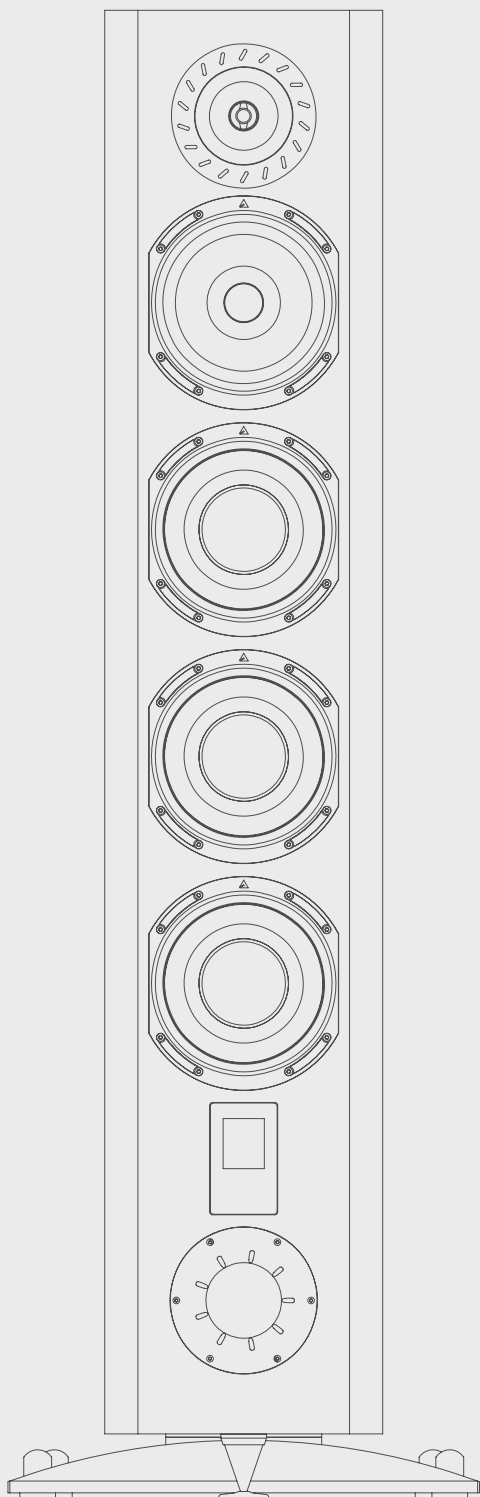

CONCEPTION & DESIGN

In the quest for innovation, TRIANGLE R&D team has developed new components. Each product is the result of a careful optimization effort. Nothing has been left to chance, for a single purpose: sharing emotions.

Multiple and long researches on the materials to be used and the finishes to be combined make it possible to offer our ranges a timeless and modern aesthetic at the same time.

Meticulous work to offer a noble and unique product expressing the TRIANGLE character.

THE PURSUIT OF LIVE SOUND

TRIANGLE sound is built on a decision to develop
« high performing » speakers to share the emotion of

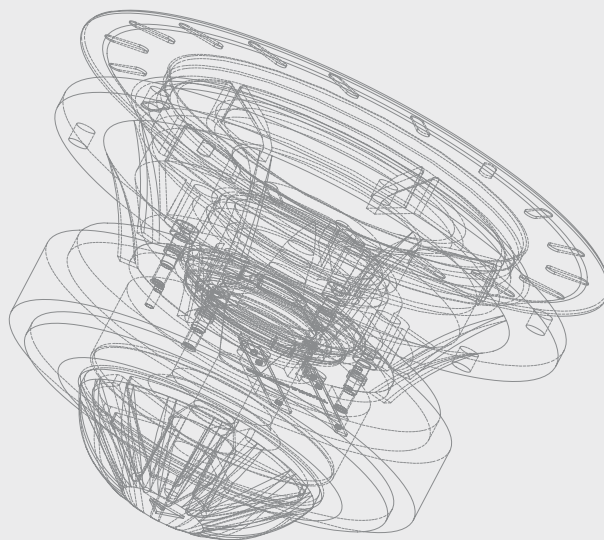

live performance.

Dynamic

Our horn-loaded tweeter increases the overall
efficiency of the speaker, thereby producing
tremendous energy and vitality.

Light

To create an excellent realism, as well as the finesse
and details of each instrument, TRIANGLE uses
light and resistant materials to maintain maximum
information levels even at low volume.

HORNLOADED TWEETER

A real TRIANGLE trademark of technology and performance, the horn loaded tweeter uses a Magnesium dome in combination with a compression chamber. This technology provides high efficiency with low distortion and excellent directivity.

MIDRANGE

TRIANGLE favours cellulose pulp membranes (paper) for the midrange drivers, due to the low weight and high rigidity. Combined with the small pleated suspensions, this assures low coloration,

WOOFER

The woofers have a glass fiber membrane, with an inverted half-roll suspension, to assure the driver stops quickly and precisely. This technology prevents any unwanted resonance and produces top quality sound.

MAGELLAN 40TH

40TH ANNIVERSARY EDITION

Magellan is the essence of TRIANGLE's know-how, a strive to obtain the highest possible results, an exclusive product in which every element has been carefully chosen.

Made of the finest materials selected with utmost attention, this 40TH anniversary edition carries on this fundamental approach. Combining elegance and technology, it is a continuation of TRIANGLE's investment in favor of a target of pleasure and emotion.

Cabinet structure

Magnesium alloy tweeter

LHS2

Tweeter TZ2900PM-MG

NEW DOME MADE OF MAGNESIUM ALLOY

Several years of research and development have led to the design of the new tweeter TZ2900. In this limited edition, TRIANGLE introduces a magnesium alloy dome for a better transition to the midrange driver. Combined with the patented horn tweeter technology, this new transducer brings out all the details of the upper harmonics.

LHS2 System

DRIVERS WITH HEAT SINK

The MAGELLAN 40TH anniversary edition speakers are equipped with a proprietary cooling system called LHS 2. A heat sink consisting of a heat transmission ring covers the back of the motor. This heat sink allows an optimal heat transmission to the external structure of the driver, thus improving the power handling of the transducer.

High-density cabinet and architecture

SOLID WOOD CABINET

The design of the enclosure is crucial to the sound quality, and the cabinets of the MAGELLAN 40TH anniversary edition have been carefully designed to ensure total inertia.

The curved shape of the cabinet is made of successive layers of high-density fiberboard, each 3mm thick, thus excluding any internal parallels. This cabinet is characterized by a specific architecture resulting from a thorough study of the vibrations and micro-deformations of the cabinetry.

Reinforcements have been placed strategically to make sure the cabinets are rigid enough to withstand the powerful vibrations generated by the drivers at high volume levels.

Signature

THE ART OF SOUND WITH A FRENCH TOUCH

The Signature range is the result of the hard work and expertise of the TRIANGLE craftsmen.

Each speaker is a form of luxury craftsmanship, made and assembled with uncompromised precision, in view of achieving crafted perfection and irreproachable sound.

Benefiting greatly from the R&D carried out for the development of the Magellan range, SIGNATURE combines the finest woodwork with TRIANGLE's acoustic expertise.

Exclusive technologies

SEMI POD-MOUNTED TWEETER

TRIANGLE first used the pod-mounted tweeter when the company designed the CX2 speaker back in 1981.

TRIANGLE is updating this technology, which features a semi pod-mounted tweeter. This positioning feature guarantees balanced control of both resonance from the front of the cabinet and diffraction caused by changes in the cabinet's shape.

This assures a more transparent, open, and richer listening experience. The sound elements are more detailed, accurate and the result is an amazing three- dimensional combination.

TWIN VENT : SOLID BASS

What makes the Twin Vent original is that it discharges through a single vent the rear sound waves created by the bass drivers. This system ensures that each driver is completely isolated.

Increasing the volume of the sound does not disrupt the tonal balance; the only remaining distortion limit is the driver's mechanical characteristics. The results in terms of power handling are amazing. The listening experience offers dynamic, solid, well-sustained bass.

SPEC: SINGLE POINT ENERGY CONDUCTOR

The SPEC (Single point energy conductor) is a brushed steel point. Like the cello, it evacuates part of the mechanical energy towards the floor, thus improving sound quality.

Cabinet vibration is kept to the minimum and has little effect on sound reproduction. TRIANGLE's attention to detail makes all the difference.

ESPRIT 40TH

TRIANGLE LEGACY

In 1980, Renaud De Vergnette, passionate about art and music, developed in his modest workshop an innovative loudspeaker, the 1180. Bold new achievements, filled with technological innovations, slowly enabled TRIANGLE to really shine in the French high-fidelity sector.

40 years later, a limited "Anniversary" edition of two iconic models celebrates the history and know-how of TRIANGLE.

Entirely redesigned and improved, the mythical speakers Antal & Comète feature the latest acoustic innovations from the R&D department. Between legacy and perpetual quest for innovation, this 40th Anniversary Limited Edition embodies the philosophy of TRIANGLE.

Exclusive technologies

NEW MAGNESIUM DOME

The horn-loaded tweeter TRIANGLE is known for uses a metal dome in combination with a compression chamber.

In this 40th Anniversary Series, the unprecedented use of a composite dome in rose gold anodized magnesium, offers the tweeter high efficiency, controlled distortion, and excellent directivity. Magnesium combines two desired qualities: lightness and rigidity. The dome is designed specifically to support the coil, ensuring even and homogeneous alignment. This design also offers high consistency during production.

BASS DRIVERS

Providing a significant performance upgrade, the Antal 40th incorporates a new generation of bass drivers for high impact and musicality.

The extremely rigid membrane is a unique composition of two types of wood pulp coupled with flax combined with carbon fiber, limiting distortion despite its long throw. The driver has a generously sized engine, ensuring excellent control and great sharpness. The Antal 40th delivers deep bass, with a clean and detailed sound.

DEDICATED SPEAKER STANDS

Each speaker has two sets of decoupling spikes: the first one in rose gold aluminum, adjustable in height and provided with lock nuts for surfaces like carpets, and the second one in rubber for more rigid surfaces.

These accessories enable decoupling by significantly reducing the transmission of unwanted vibrations to the floor, thus improving the listening experience.

The S04 40th Anniversary speaker stand will be perfect for the Comète 40th speakers. The speaker can be screwed to the stand for more rigidity.

DESIGN, MUSICALITY & ENJOYMENT

ESPRIT Ez is the genuine materialization of TRIANGLE's philosophy: it offers music lovers an uncompromising, dynamic and living sound, which conveys all the finesse and beauty of any musical composition.

It features a sleek design that compliments the excellent sound. The loudspeakers' clean and sharp lines are underscored by aluminum trims with concealed screws. The floorstanders sit on a glass pedestal with adaptable spikes. The ESPRIT EZ speakers are desirable and aesthetic objects that blend perfectly into your home environment.

VERSATILITY : MUSIC & HOME THEATER

The sonic realism and detail, emblematic of the TRIANGLE sound, give the Borea speakers great versatility. They are perfect for both listening to music or in a home theater system.

The range is composed of 3 models of floorstanders (BR08, BR09 & BR10), 3 models of bookshelf speakers (BR02, BR03 & BR05), 2 center channels (BRC1 & BRC2) and 2 surround speakers (BRA1 & BRS1). You can set up the most efficient systems ranging from 2.0 to 9.2.2.

SURROUND SPEAKERS

Both Borea BRA1 & BRS1 speakers are the ideal complement to a stereo installation to bring home cinema sessions to life at home. There are discreet and versatile speakers designed to fit into all types of Home Cinema compositions. Thanks to a sound filter with 2 positions, it suits at any composition as surround effect speakers by placing them on the walls.

They are equipped with a 24mm silk dome tweeter, a 16cm paper cellulose midrange.

EISA AWARD 2020-2021

« BEST BUY HOME THEATER SPEAKER SYSTEM »

BOREA range awarded the prestigious EISA prize. The range is acclaimed for its excellent acoustic performance, its tone accuracy, and the excellent value for money it offers.

HIGH-END WIRELESS SPEAKERS

DIGITAL SIGNAL PROCESSOR

The Capella use digital signal processing to reach performance never achieved with traditional speakers. The frequency response of each driver is digitally optimized via DSP. This new generation of active bookshelf speakers impress by their efficiency in low frequencies. Dynamic filtering continuously follows the driver movement to exploit it to its full potential. It results tremendous bass performance for a compact speaker.

ROOM EQ

In order to reveal the full acoustic potential in every room, from the most damped to the most reflective, the TRIANGLE Capella integrates automatic calibration technology. You simply take the measurements of the listening area (with your phone or external microphone). The speaker will automatically adjust the sound based on its environment. This technical revolution guarantees high quality sound without changing your interior design.

WiSA WIRELESS TECHNOLOGY

Thanks to WiSA technology, the Capella get rid of the cables to stream a wireless signal without latencies (2.4 ms). The Capella system consists of 2 speakers which can be placed freely in the room without constraints. They synchronize using WiSA to a compact Hub which accommodates all analog and digital audio inputs (Wi-Fi, HDMI, USB, RCA, Optical, etc.).

BOREA CONNECT

UNIQUE VERSATILITY AND EXCEPTIONAL SOUND

BOREA CONNECT is the promise of audiophile sound quality in an elegant, compact package, with unlimited connectivity. This next generation of active speakers combines TRIANGLE acoustic expertise and the latest technology innovations.

Your active BOREA speakers offer a wide range of possibilities, from pairing them with your turntable or TV to streaming high-quality music from your smartphone.
