

ZE300

Ultra-compact. Noise-cancelling.
Perfect for music, video, and sleep.

ZE300

Ultra-compact. Noise-cancelling. Perfect for music, video, and sleep.

At just 4g per earpiece, the ZE300 is the smallest and lightest noise-cancelling earphone in final's lineup. Designed from the best-selling COTSUBU Series (over 500,000 units sold), it's 20% smaller than the ZE3000SV — ideal for smaller ears and comfortable enough to wear while sleeping. Its completely redesigned internal structure delivers both superior sound and a secure fit.

Balanced Noise Cancelling & Ambient Awareness

Despite its compact size, the ZE300 features advanced noise cancellation using final's proprietary algorithm. Enjoy immersive, high-quality sound with powerful isolation — or switch to Ambient Mode with a single tap to stay aware of your surroundings. Three sound modes let you choose between Noise Cancelling, Ambient, or Off.

Smart Features for Comfort and Durability

- Airflow Ports release pressure inside the ear, reducing strain on the eardrum and protecting the internal drivers — perfect for lying down.
- Touch Control Disable Mode prevents accidental operation and turns off LED and voice prompts, ideal for sleeping or focused listening.
- Clear Calls with a high-performance noise-suppressing microphone.
- Powder-Coated Finish resists fingerprints and provides a secure, non-slip grip.
- IPX4 Water Resistance ensures worry-free use in daily life or light workouts.

Signature final Sound

With a newly tuned acoustic structure, ZE300 delivers soft, detailed, and natural sound for music, video, and gaming — capturing the essence of every tone without fatigue.
